

**HIT SPORT**

INFLATABLE STAND UP PADDLE BOARD

PRODUCT CODE : HIT00619

USER  
MANUAL

## INTRODUCTION

### **Thank you for purchasing the Hit Sport Paddle Board.**

Please read the entire manual and follow assembly and operation instructions carefully before you begin paddle boarding. Please ensure you have properly set up the product and have a thorough understanding of how the paddle board works before you begin, failure to do so could result in serious injury or death.

This manual provides you with instructions on how to set up, repair and store your paddle board. This manual does not replace a course on paddle boarding nor provide detailed instructions on how to paddle board. If this is your first time using a paddle board, and for your own safety, it is advised you seek this specialist knowledge from a reputable person and/or company on how to paddle board safely. If in doubt please contact your local certified surf school, who will be able to provide you with more detailed knowledge before you paddle.

The manufacturer is not responsible for unapproved modifications to the paddle board, and/or for any use for which it has not been designed.

The warnings, instructions and advice discussed in this manual do not cover all conditions or situations that could occur. Before operation of the paddle board, it must be understood by the user, that common sense and caution must be used at all times when operating the product. You must follow local safety regulations and advice for your own safety and those around you.

### **PLEASE RETAIN THIS MANUAL FOR FUTURE REFERENCE**

## PERSONAL SAFETY

Users of this product should be aware that stand up paddle boarding can be dangerous and requires extreme caution for any user no matter their experience. Using this product inappropriately or carelessly may cause injury or death.

Please consult your doctor or physician before you begin paddle boarding. This sport is physically demanding and requires the person to be in good health.

DO NOT operate this product under the influence of drugs or alcohol.

Users should know how to swim and wear a certified floatation device and leash when operating this product.

Do not carry sharp objects when operating this board. Avoid the board coming into contact with sharp objects, rocks, sandbanks and coral reefs.

Please inspect the paddle board and accessories before each use to ensure it is free of damage or faults.

Do not use if there is suspected damage to the board. Please consult the repairs section of this manual.

Do not exceed the maximum weight capacity advised for the paddle board. Only one user should be on the board.

Ensure the board is fully inflated and check pressure of board. Always maintain a safe distance from shore when you use this product. 150m is advised.

This product should only be used by those aged 14 and above. Caution is advised. An adult must supervise the use of this product at all times and have read this manual.

Users are responsible for their own safety and the safety of others when using this paddle board. Do not use this product near other boat traffic, or watercrafts.

### Check local weather information and advice before use.

- DO NOT USE in white water
- DO NOT USE in offshore current
- DO NOT USE in breaking waves
- DO NOT USE in offshore wind

## WHAT'S WHAT?

### ISUP SPEC :

**Product name : Hit Sport Inflatable SUP Board 9ft Orange & Green**

**Product code : HIT00619**

**Max payload : 80 kg**

**Max air pressure : 15 psi**

# GETTING STARTED

## CONTENTS

- ❶ ISUP Paddle Board x 1
- ❷ 3-Shaft Aluminium Paddle x 1
- ❸ Double-Action Pump x 1
- ❹ Carry Bag x 1
- ❺ Repair kit x 1
- ❻ Central Fin x 1

## PUMP

Your Board comes with a high-pressure pump. This pressure pump, pumps low volume of air with each pumping motion. It takes longer to fill the board with air, but allows the board to reach a higher air pressure. This is good for achieving maximum performance from the board.

Assemble the pump by twisting the hose into the pressure gauge.

⚠ If the pump begins to squeak or becomes stiff please lubricate the pump. To lubricate the pump, simply open the top and place a few drops of oil/grease on the gasket and tube.

⚠ Please clean the air filter periodically, also located inside the top of the pump.

## BOARD INFLATION

Remove the paddle board from the box onto a level and smooth surface.

Unfold the board until it is laying flat with top side facing up.

Remove the air valve cap and push the air valve down while at the same time twisting slightly in a clockwise motion

This will put the air valve in the UP position.

⚠ When the air valve is UP, air can only flow into the board. When it is in the DOWN position, air can flow in and out of the board.

Attach the pump hose to the air valve with a clockwise half twist motion.

Begin pumping air into the board by sliding the pump handle up and down. Try to maintain proper posture and leverage while you pump.

Continue to inflate the board until you reach the recommended 13-15psi.

• DO NOT USE AN AIR COMPRESSOR.

• MAXIMUM AIR PRESSURE FOR THIS PRODUCT: 15psi. Do not exceed this, overinflating this board could damage the board and void your warranty.

Remove the pump with a counter-clockwise half twist motion and screw on the air valve cap.

• The air pressure in the board can vary over time and depends on temperature. If there is a small decrease of pressure over a number of days, please pump the board up slightly until you reach the recommended psi.

• Do not pump the board to a high pressure and leave it exposed in the hot sun. Deflate the board slightly and check the pressure of the board. The heat from the sun should increase the pressure of the board.

## FIN INSTALLATION

It is easier to insert the large middle fin when the board is inflated. Please follow "BOARD INFLATION" steps first.

Turn the board over so the fins are facing up and towards you.

Once the board is inflated, slide the large centre fin into the fin base and insert the push-in pin.

## SUP PADDLE

Your board paddle comes in three pieces. To build the paddle, hold the button in while sliding the pieces together until they click into place. The last section (top) of the paddle is adjustable.

To find the ideal height for your paddle, start by building the paddle so when you extend your hand upwards towards the sky, the top of the paddle is in line with your wrist. From this point, adjust the top section up or down until the length is comfortable for you.

A longer paddle is better suited for a smooth, easier paddling motion. A shorter paddle is good for performance or competition riding.

## BOARD DEFLATION

Before you deflate the board, clean and inspect the board after each use.

Remove the centre fin and valve cap before you begin deflating the board.

SLOWLY AND GENTLY press down on the valve head to begin expelling air from the paddle board. Increase the pressure you apply to the valve as the board deflates.

• DO NOT deflate your board too quickly as this can cause damage to the valve and blow-out the sealing ring.

Once the pressure on the board has decreased, twist the valve into the DOWN position which will open the valve and allow air to escape while you roll up the board.

## FOLDING THE BOARD

Please ensure you check that the board (as well as the accessories) are completely dry, and clear of debris before you begin to fold your board.

## STORAGE AND MAINTENANCE

Having an inflatable stand up paddle board makes portability and storage very easy.

Before storing, hose off the board and let it dry completely to prevent mildew build up. Try to avoid getting moisture inside the paddle board.

Store your board in a clean, dry area. Avoid storing your board in direct sunlight.

If you have to store your board inflated between uses, attach your pump to make sure the board is carrying the correct air pressure.

Do not roll up the board too tight when storing it while deflated.

If fins become bent, place them in boiling water and use heat (e.g. hairdryer) to bend them back into position.

## REPAIRS

A repair kit is included with your paddle board. General wear and tear, and minor repairs can be fixed by the user with the provided kit.

If your board needs repair, use the patches in the repair kit and follow these steps:

Deflate the board completely, lay it flat and wait for it to dry.

Cut a patch that is 2 inches larger than the tear/rip all the way around. Round the corners of the patch.

Use alcohol to clean the repair area.

Apply three coats of vinyl glue (not included) to the patch and the board. Allow adhesive to become sticky by letting it dry for 5 minutes.

When both the patch and board are sticky, carefully apply the patch to the repair area with firm pressure, starting at one corner and working outwards.

The adhesive will react quickly, so make sure the positioning is precise and accurate. Use the roller to ensure the patch lies flat and even.

Wait 24 hours before re-inflating the board.
